Any Guess as to what these might be?

These are porcelain blocks which are used to fabricate custom crowns in a day!

After the tooth has been prepared, the image is scanned and the selected block is placed in the Cerec milling machine. The Cerec machine then custom fabricates the crown to the Doctor's exact specifications and

it is ready for same day insert. Of course, not all crowns can be completed in one day, but if you are a candidate for this procedure, remember to ask to see your crown being made while you wait.
